

Eco-Tuff Non-Skid Coating Colors

NOTE: The colors shown are actual photographs of our standard high strength fade resistant floor coating colors applied to concrete tiles. Anti-fade infrared reflective colors are optional. Apply a minimum of two topcoats after applying our Eco-Tuff Primecoat when installing on unsealed and profiled substrates. Eco-Tuff Floor Coating is recommended as the final topcoat to increase aggregate encasement in the coating. If you wish to increase the sheen level, you may apply our Eco-Tuff Gloss Clearcoat as your final finish coat. Use this chart only as a reference guide as print or monitor viewing will vary. We recommend applying our 2 ounce sample colors to verify actual color results.
